

Hi

Please read the following notes.

Rules

- You'd better be in time.
- You'd better render the homework and the calculations to the TA as you enter the lab.
- You'd better be carefully arranged.
- You must behave gently.

Homework

- There will be new homework each week. You must answer it in pairs and take the solution paper with you to the lab and render it to the TA.

Grading system

- There will be two quizzes each session. By this I mean that one is written and concerned with the last experiment you've done, and the other is unwritten and related to your current experiment.
- There will be two final exams: The first one is related to the physical chemistry lab1 and will be a take-home exam. The other one will be at the end of semester and will be a routine final exam (The final dates will be stated in the future).
- The homework and calculations are also a matter of importance.

Important note: in grading the homework, your activity in the lab will be looked at. Thus two members of the same group might be given different grades for their homework.

Kind Regards,

S.R.H
